DevOps Roadmap

Beginner → Senior

A free, hands-on path from Linux to Platform Engineering.

By Ubong Eduok

Swipe →

Don’t learn 50 tools.

Learn to take one app to production, and make it:

Secure

Observable

Scalable

Highly available

Automatically deployable

Recoverable

Cost-efficient

That is what a senior DevOps engineer does. This roadmap trains exactly that.

By Ubong Eduok

Every topic comes with:

1

A real-world example

How real systems use it

2

Diagrams

The mechanism, drawn

3

A step-by-step guide

Commands you can run

4

Hands-on tasks

Each with a way to check it

21
Levels

248
Topics

1,700+
Tasks

590+
Diagrams

Plus a capstone project for every level.

The path 1/3 Foundations

L1 **Linux**
Operate servers without tutorials

L2 **Networking**
DNS, TCP, TLS and load balancers

L3 **Git & GitHub**
Branches, pull requests, Actions

L4 **Docker**
Images, Compose, container security

L5 **CI/CD**
Pipelines, rollbacks, canary deploys

DevOps Roadmap

5 / 10

The path 2/3 Cloud & K8s

L6

Cloud (AWS)

EC2, VPC, IAM, S3, RDS, CloudFront

L7

Terraform

Infrastructure as code and state

L8

Kubernetes

Pods to RBAC and NetworkPolicies

L9

Helm

Package and release on Kubernetes

L10

Observability

Metrics, logs and traces

DevOps Roadmap

The path 3/3 Senior level

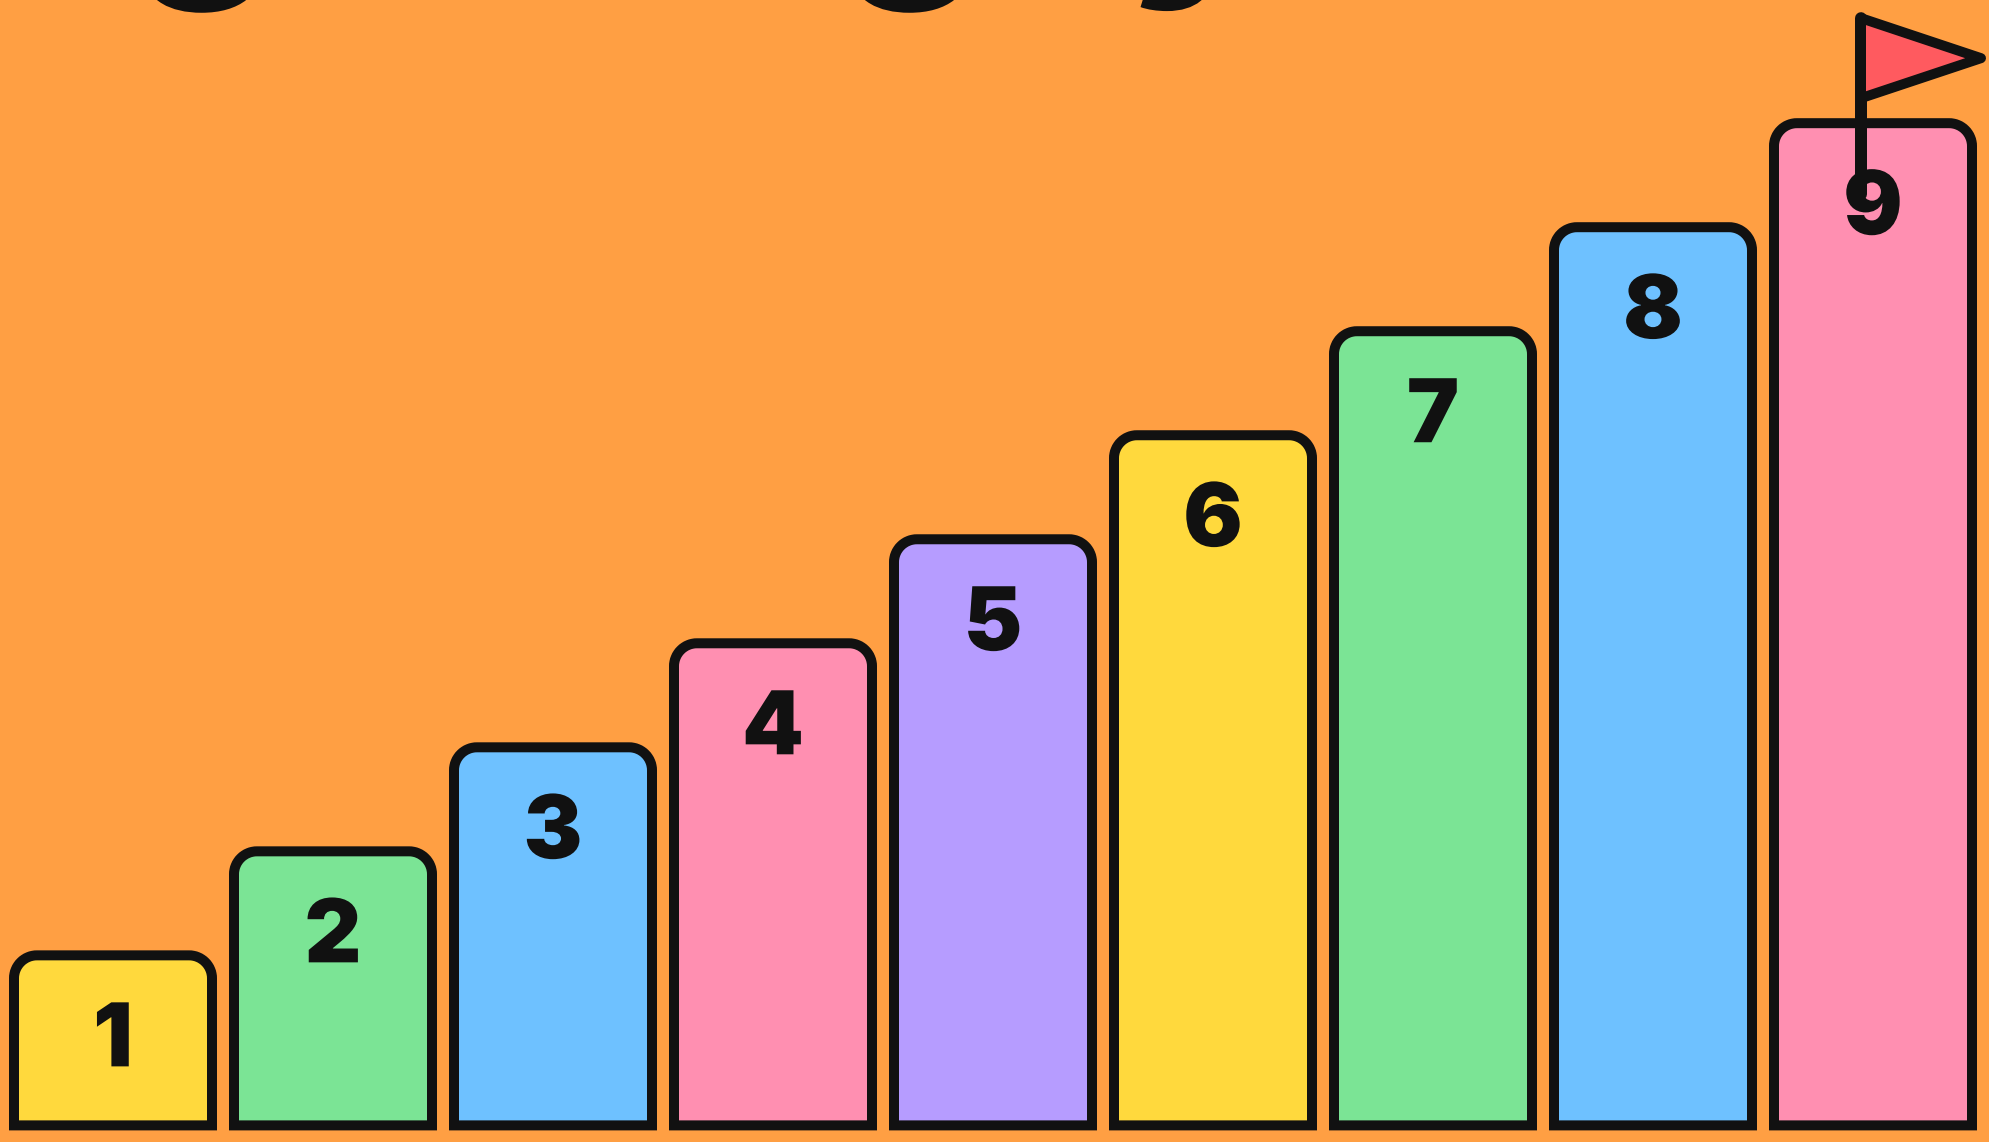

- L11 Security
- L12 Advanced networking
- L13 Databases & distributed systems
- L14 SRE
- L15 Disaster recovery
- L16 Advanced Kubernetes
- L17 GitOps
- L18 Platform engineering
- L19 Architecture
- L20 Cost optimization

DevOps Roadmap

9 projects. 1 growing system.

1 Basic server
2 Docker
3 CI/CD
4 Terraform
5 Kubernetes
6 Production K8s
7 Observability
8 Disaster recovery
9 Senior architecture

By Ubong Eduok

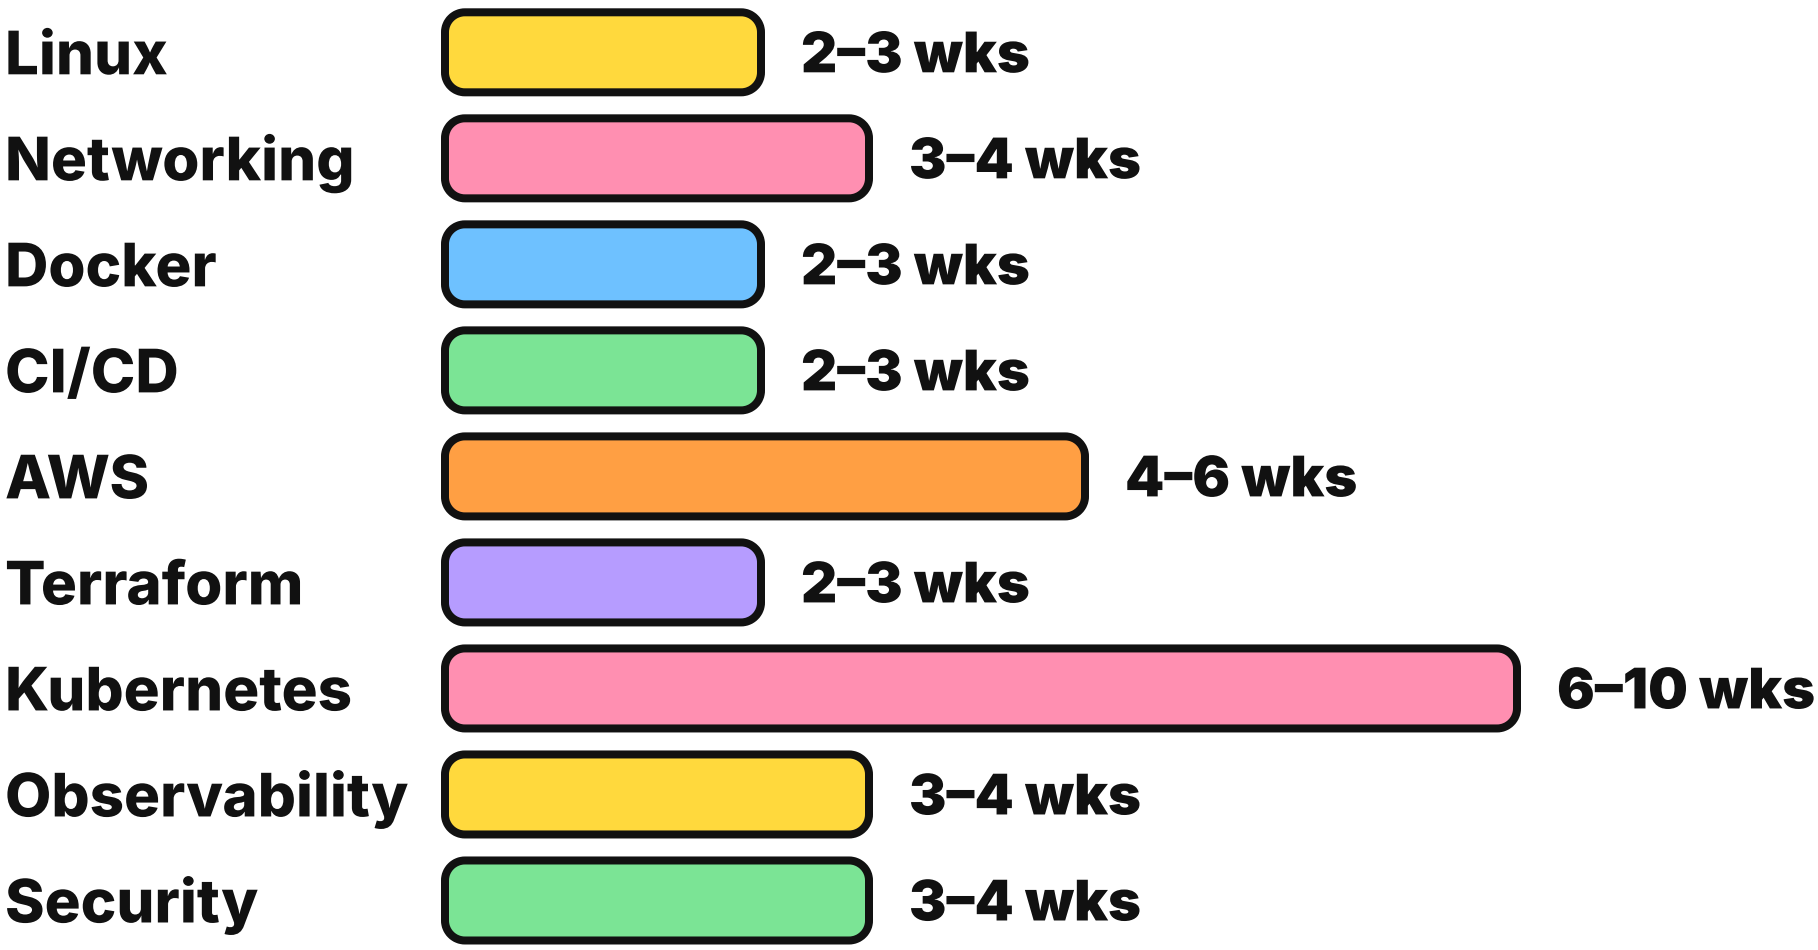

Swipe →

How long does it take?

8–12 months
to a strong practical level, at 2–3 hours a day

12–24+
months to senior judgment, through production-style work

Suggested time per stage (selected stages)

Then deploy with AI agents.

A free companion repo: 6 agents and 12 skills for Claude Code.

1. **Plan first, apply only after you approve**
2. **Dry-run by default; production needs explicit confirmation**
3. **VPS, AWS, Kubernetes and GitOps**

Plan → Review → You approve → Deploy → Verify
